how do you know which to use and who can you trust for a reliable response?

Owners, architects and engineers demand the job be done economically, on time and right. It isn't always easy, is it?

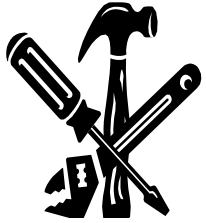

Those are very good questions.

Construction chemicals and compounds encompass a broad spectrum of products and applications. Which one is correct for the job at hand may depend on numerous factors with any one or more influencing the choices. Often, different manufacturers offer similar items. In addition, and to complicate matters even further, several products might be appropriate, depending on the circumstances. Temperature, strengths needed, cure time, budgets, color, and other issues too numerous to mention all may influence the final product recommendation.

With Gamka you can be sure.

When a particular item has been specified, the responsibility falls on the engineer and/or architect who made the call. Still, the contractor using the material must carefully follow the installation procedures. In those instances where the choice is not dictated, the contractor may need information and guidance to permit an informed choice. With a multitude of chemical manufacturers and hundreds of chemicals to research, who has the time to sort everything out? The answer is Gamka. We have the expertise and the best of manufacturers as our vendors. Tell us about your application and

whatever restrictions are involved; be they monetary, time, appearance, strength or whatever. Gamka will work within your limitations to mate the correct chemical to the application. Want to be sure? Ask Gamka for a demonstration on your job. **Just call Toll Free 888-248-1400.** Gamka will help.

Construction and industrial chemicals are as much tools of the trade as these.

Visitors are welcome at 983 New Durham Road, in Edison, NJ. Come by our 2,000 sq. ft. showroom and learn what Gamka is all about, meet the people, see for yourself how we can solve construction problems for you.
