The TECHNOLOGY of CUTTING

This Slab Saw has a 65 hp gasoline engine and will accept a 36" blade.

It just isn't as simple as it appears. Cutting concrete, block, brick, pavers and asphalt

looks easy. Choosing the right equipment is not. How deep to cut often determines what saw to use. Deep cuts take a large blade and lots of horsepower to drive it. If it is concrete, is it fresh? Green? Cured? Is dust an issue or will water be the problem? The science in building a diamond matrix is complex. Driving the blade decision may be price considerations: more diamonds, more life, more cost.

GAMKA's rental saws will cut to a maximum depth of 12.625" with a 30" diameter blade. Many other sizes and blades to 54" in diameter are available for rent or purchase.

Not all cuts are equal, nor horizontal.

For versatility, hand-held cutoff saws are hard to beat. They are the jack of all trades in the cutting business, depending on the application. Standard blade diameters are 12" and 14". Powered by gasoline engines that spin the blades to 5,000 RPM, they will cut asphalt, brick and block, concrete, metal pipes and wood, in demolition work. Change the blade for the job at hand and go!

This Cutoff Saw is ideal for concrete and masonry but will slice through piping and ceramics.

Block, brick, pavers, tile: all different.

Want the most efficient cutting? Know your material or waste time and money. Just because it looks like a paver does not mean that all are created equal. When in doubt ask a Gamka expert.

For thick or thin with gas or electric power options.

Cut concrete with a chain saw?

Yes, there is such a thing and it slices through concrete reinforcements and masonry stone also. Driven by exhaust fume free, explosion-proof hydraulic power, this diamond chain saw makes plunge, bottom, notch, trim and corner cuts with no overcutting, to 15" or 20" depths. Just try that with a round blade.

There are different power sources for versatility such as

gasoline and diesel engines, hydraulic, electric and air motors. Cutting quickly and economically takes product know how. GAMKA

Cut concrete like you would cut a tree with this hydraulic powered diamond chain saw.

will assist in reaching the correct decision by offering numerous options, all dependent on the application. GAMKA has diamond blades for virtually every purpose, wet and dry cutting, and ranging from Economy to Super Premium in pricing. The user must decide to rent or purchase the equipment and the blade. Call GAMKA for the best method for the project. GAMKA has choices!
