# ASK THE EXPERTS

What does Gamka do? We are the concrete experts. If you have anything to do with concrete, from placing it to restoring it and every stage in between, Gamka can help. We have the equipment to vibrate it, screed it, finish it, heat it, grind it, drill it, and cut it. We have the ties, the chairs, the expansion joint, the fillers, the anchors, the keyway, the stakes, the insulation. We have the chemicals to seal it, cure it, damp proof it, stain it, clean it, release it, bond it, grout it, level it, accelerate it, retard it and protect it. If you don't want leaks we have the water stop, if you have leaks we have the plugs. Got cracks? We have the caulk and patches. Concrete contractors come to Gamka for solutions. You have problems? We have the answers.

**Vibrate it, screed it, trowel it, heat it, grind it, drill it, cut it... Gamka knows how.**

**Do not skimp here. Its prep, prep, prep if the repair is to last.**

## With Gamka you can be sure.

When a particular item has been specified, the responsibility falls on the engineer and/or architect who made the call. Still, the contractor using the material must carefully follow the installation procedures. In those instances where the choice is not dictated, the contractor may need information and guidance to permit an informed choice. With a multitude of chemical manufacturers and hundreds of chemicals to research, who has the time to sort everything out? The answer is Gamka. We have the expertise and the best of manufacturers as

our vendors. Tell us about your application and whatever restrictions are involved; be they monetary, time, appearance, strength or whatever. Gamka will work within your limitations to mate the correct chemical to the application. Want to be sure? Ask Gamka for a demonstration on your job.

**Gamka will help drum up business for you.**
