# GAMKA INTRODUCES .

## Wacker's "Plug and Play" External Vibration System for Formwork

### CONCRETE SOLUTIONS FOR TOUGH CONSOLIDATION PROBLEMS.

WHEN POOR ACCESSIBILITY, DIFFICULT GEOMETRY, OR EXCESSIVE REBAR IN THE FORMWORK MAKES USING INTERNAL VIBRATORS IMPOSSIBLE, EXTERNAL HIGH FREQUENCY FORM VIBRATION IS THE ANSWER.

### USER FRIENDLY AND SAFE!

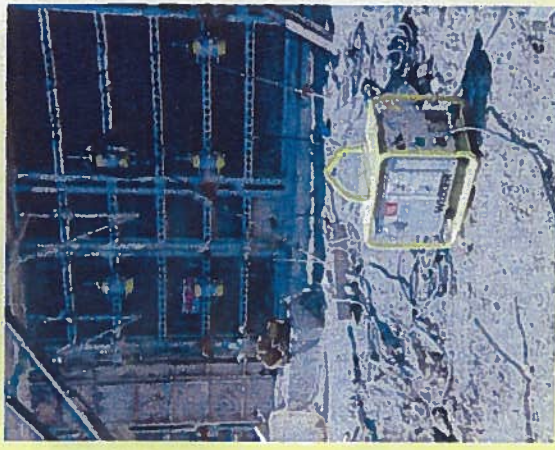

**SIMPLE TO USE:** Units attach to forms quickly with operator friendly, easy to move clamps;

**SAFE:** LOW Voltage Inverters power 4 units each, produces only 42 volts, will not energize metal forms with high current, plus no moving parts, meets all UL standards. Vibrators are heavy duty with vibration proof stators for reliability.

**BECAUSE NO TWO JOBS ARE THE SAME, The Plug and Play System allows vibration amplitude adjustment for different applications. The vibrators transmit a vibrating pulse through the forms and into the concrete. The concrete then consolidates as the air bubbles are released. This process makes the concrete denser and more compact thereby strengthening the concrete after it cures.**

**WHEN CONSOLIDATION PROBLEMS CALL FOR CONCRETE SOLUTIONS, WACKER HAS THEM!**

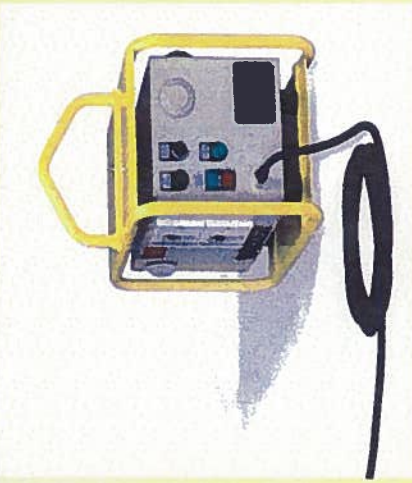

**PLUS-----**

## Wacker Internal high frequency vibrators operate from the same inverter!

**Available to rent or buy, only from Gamka!**

.... and if you are in the Precast and Prestressed business, stop thinking Self Compacting/Consolidating Concrete, Wacker has **CONCRETE SOLUTIONS** for you too! Ask us for plant specific, engineered vibratory application answers.
