

# If You've Got Leaks, We Can Help!

Leaks in concrete structures are complex problems that require more than temporary fixes. Tracking down these leaks, and permanently stopping them, can be difficult. That's why Prime Resins developed a line of chemical injection resins that can be used for nearly every concrete waterproofing application.

Cracks, improperly installed or failed joint seals, settling and misalignment are all problems that are easily fixed through injection grouting. Prime-Flex grouts are used to stop infiltration, seal leaks in concrete structures, and stabilize soil by filling voids caused by erosion. Repairs are cost-effective, quick and permanent, maintaining their flexible, yet impenetrable seals for longer than the life of the concrete structure.

- Aeration Basins
- Clarifiers
- Storage Tanks
- Wet Wells
- Utility Vaults
- Manholes
- Swimming Pools
- Storm Drains
- Access Tunnels
- Equipment Pits
- Meter Boxes
- Lift Stations
- Pump Stations
- Catch Basins
- Elevator Pits
- Below Grade Walls
- Dams
- Channels / Flumes
- Concrete Basements
